

DO YOU HAVE SEPERATE PREOP/PERIOP LEADS IN YOUR HOSPITAL?

■ 2 roles ■ 1 role covering both

Perioperative Leads Survey

Executive Summary

What services do you have available?

Preoperative anaemia investigation and management pathway	82%
Optimisation of comorbidities prior to surgery	72%
Internal referral pathways for patients whose comorbidities require additional input preoperatively eg cardiology, respiratory, renal, diabetes)	67%
Objective risk scoring for all patients undergoing high risk surgery or ASA3 and above (eg SORT, NSQIP)	64%
Risk assessment including geriatric syndromes eg frailty, cognitive problems	63%
Optimisation of lifestyle factors (weight, smoking, activity levels) preoperatively	58%
Medical or anaesthetic review of high-risk (ASA 3 or above or high risk surgery) postoperative patients	56%
Close liaison between anaesthetic and surgical teams to promote SDM	55%
Review of and plan made for patients with complex pain needs preoperatively	48%
Electronic preoperative assessment system	46%
Objective assessment of functional capacity for those identified as being at risk of reduced functional capacity (timed up and go)	46%
A 'one stop shop' where patients can attend preoperative assessment on the same day as their surgical outpatient visit	44%
Pharmacy input postop	44%
Nutritional assessment and optimisation pre-operatively	41%
Nutritional assessment and optimisation pre-operatively	41%
Geriatric input into high risk elderly patients postoperative	39%
Level 1/Enhanced Care service	39%
Paediatric perioperative pathways	39%
Surgery school	38%
Medication rationalization prior to surgery	36%
Geriatric input into high risk elderly patients preoperatively	30%
Screening for reduced functional capacity for all patients eg DASI	28%
Pharmacy input pre op	27%
Delirium pathways (identification of those at risk, interventions to avoid delirium and to manage it when it arises)	25%
Proactive discharge planning of complex patients	19%
Ready access to the outcomes of surgical patients to allow recognition of areas requiring improvement	19%
Close liaison with primary care	18%
Mental health assessment and optimisation preoperatively	15%

Do all members of staff who interact with patients preoperatively have skills in motivational interviewing and lifestyle optimisation?

15%

85%

91%

Do not work with a patient representative in the development of perioperative pathways

94% would like more support

Does someone in your department have time dedicated to perioperative services?

WHAT SUPPORT WOULD YOU LIKE TO SEE?

■ Time Allocated ■ Easy access to resources ■ guidelines ■ funding
