| 18.55 | The Guideline in Practice | Presentation Dr Steven Evans |
| 19.10 | Panel Discussion | Panel Discussion Chair: Professor Jugdeep Dhesi Scarlett McNally, Lawrence Mudford, Steven Evans |
| 19.30 | Close | |

Please note: The meeting will be recorded for external CPOC use and the recording will be made available publicly on the CPOC website.

1 Identify anaemia early in the pathway.

4 Use tried and tested treatments for anaemia before surgery. This could include advice on changes in diet, oral treatments such as iron supplements and the use of intravenous iron when necessary.

2 Make the patient aware of this and all actions going forward.

5 Make sure the patient has a personalised treatment programme including providing appropriate information about the pros and cons of the different approaches suggested to the patient and how long these should be continued.

3 Find the cause of the anaemia.

6 Communicate clearly between different members of the team so that operations are not cancelled unnecessarily and improve the interface between primary care and hospitals.

7 Talk openly to the patient about the benefits and risks of managing anaemia and the surgery.
