Q Perioperative Care-Prehabilitation Special Interest Group (SIG)

Hosted by the [Centre for Perioperative Care \(CPOC\)](#) and the [Macmillan Cancer Support](#)

The aim of CPOC is to optimise the surgical pathway from the moment someone contemplates surgery all the way until they complete their recovery. We want to see the implementation of simple but effective interventions to reduce cancellations, complications and hospital bed days. This will help tackle waiting lists, improve patient outcomes, boost efficiency and lower cost.

We are asking for your help to embed these practices in the NHS.

Our initial focus will be on prehabilitation and rehabilitation, specifically supporting and optimising peoples' physical and mental health in advance of, during and beyond treatment for cancer and other long-term conditions.

The SIG will bring members together to:

- Learn and share best practice and experiences to implement change at a local level
- Debate hot topics
- Support and influence national policy
- Enable Shared Decision Making (SDM) between patients, family and healthcare professionals
- Share high quality patient information and educational resources
- Share emerging research themes to inform clinical practice

Anyone can join our SIG by scanning the QR code using your phone camera. If you are you not a Q member, please note you will be asked to create a guest account.
